

Reshuffling Service Procedure

Version 1

Pursuant to GMMO-VO 2020 – Novelle 2025, § 6a „Capacity Exchange (‘‘Reshuffling’’), TAG offers a capacity exchange service (‘‘reshuffling’’) for products with a runtime as of 01.10.2025 06:00

Beneficiaries

The service is available for network users who:

- Have a valid and regularly contracted entry or exit FZK or DZK capacity at a TAG Interconnection Point (IP) with a duration of a year or longer (‘‘existing contracted capacity’’) and
- Intend to exchange this capacity for a new FZK monthly, quarterly or yearly product booked via PRISMA at another TAG IP or direction.

Procedure - How it works:

The new monthly, quarterly or yearly product must be booked through a regular primary market auction on PRISMA. Following a successful booking, a credit note in the monetary value of the regulated tariff applied by TAG for the new product will be issued by TAG for a maximum amount which does not exceed the monthly invoice for the regulated tariff of the existing contracted capacity.

- ➔ Auction surcharges as well as surcharges pursuant to Sections 3 (9) and pursuant to Section 3 (9) and (9a) of the Gas System Charges Ordinance 2013 (GSNE-VO 2013) are excluded from the reshuffling credit note.

Reshuffling requests must be submitted within 5 working days after the successful booking of the new monthly, quarterly, and yearly products via e-mail to commercialservices@taggmbh.at using a dedicated form made available by TAG. The reshuffling request is binding. TAG will review and respond to the requests, issuing confirmation in the event of successful reshuffling within 3 working days.

What happens with the existing contracted capacity?

At the time of the reshuffling application and for the whole duration of the reshuffling service, the existing contracted capacity to be reshuffled may not be allocated to any balancing groups or involved in any secondary market transactions (transfer of user and assignment) for the entire duration of the reshuffling period. Any breach of these conditions by the network user will result in the retroactive termination of the reshuffling service and to full invoicing of both the existing contracted and newly booked capacity.

At the time of the reshuffling application, no invoice resulting from the existing contracted capacity shall be overdue.

Securities

The security due for the newly booked capacity shall be provided according to TAG GTC's without any compensation or reduction from the already provided security related to the existing contracted capacity.
